PROJECTS

- CMS Financial Web Application
(SPRINGBOOT,REACT,SQL)

CMS is debt recovery system deployed in debt recovery agents. Companies likes Banks, leasing companies, telecommunication providers outsource their debt collection to 3 rd party debt recovery agents.

- SLT-Mobitel C-Panel Project

- SLT-Mobitel Enterprise Project
(SPRINGBOOT,REACT,SQL)

As a Backend Java and Spring Boot Developer for the project at LakMobile Solutions (PVT) LTD, I was responsible for crafting the foundation of the web application and ensuring seamless communication between the frontend and backend. My role focused on creating robust APIs, managing the database, and implementing essential services to deliver a high-performance and feature-rich application. In addition to API and database work, I also implemented various services that were integral to the application's functionality. These services encompassed a range of tasks.

- Metro Field Management System - Metropolitan (Pvt) Ltd
(SPRING BOOT,REACT,SQL)

Employee management system join with ERP SAP System. As a backend engineer, I've played a pivotal role in developing an Employee Management System integrated with the ERP SAP System. Leveraging Spring Boot for the backend, I've contributed to the creation of a robust and scalable architecture. My responsibilities included designing microservices, implementing RESTful APIs, and ensuring seamless communication between different modules.
